

HIP surgery and rehabilitation (20 days program)

Hip replacement is a surgical procedure in which the hip joint is replaced by a prosthetic implant. Hip replacement surgery can be performed as a total replacement or a semi (half) replacement.

Such joint replacement orthopaedic surgery is generally conducted to relieve arthritis pain or fix severe physical joint damage as part of hip fracture treatment. Hip replacement is currently the most common orthopaedic operation.

The program consists of the following:

- ✓ The patient is prepared for the surgery with a complete physical examination and laboratory tests, to ensure that he/she is in the best possible condition to undergo the operation.
- ✓ On the 3rd day of the stay the patient is transferred to Clinic where the operation takes place.
- ✓ During the post operational period (2-3 days) rehabilitation already begins in the hospital and on the 4th day after the operation the patient is transferred back to the Medical Resort.
- ✓ Rehabilitation: each day exercises, gymnastics take place with the help of our medical staff. In addition to these we provide massage, relaxation and physiotherapy in order to recover as smoothly and as quickly as possible.
